18-Person Enersound Conference System | *CS-300-18*

The 18-Person Enersound Conference System CS-300 is a cost-effective solution to both your microphone and sound needs. It includes everything that you will need for a panel discussion or meeting of up to 18 participants. Please note that each delegate microphone can be shared by two people, and thus, expand the system for up to 35 people (34 delegates and 1 Chairman). It can also be expanded by adding extra microphones for a maximum of 50 microphone units per control unit. Another control unit must be added every 50 additional microphone units for a maximum of 3 control units and 150 microphones.

Each microphone is connected to the next one through the attached single cable. The last microphone is connected to the control unit to complete the loop. Consequently, there is only one cable in the system that interconnects all the microphones. This makes the set-up easier, cleaner and eliminates unnecessary cables that may cause noise, failures and visual clutter.

Features

- Plug and play, easy one-cable, daisy-chain installation
- Superb audio quality with cardiod condenser capsule
- Excellent speech intelligibility
- Full discussion control
- Highly flexible and customizable system expandable for up to 150 units
- Easy to use, no operator required
- Built-in speakers in each unit
- LED ring light indicator to easily identify active microphones

System Includes:

(17) Delegate Units DU-300 (each delegate unit comes with a 2-meter cable attached)

(1) Control Unit CU-300

(1) Chairman Unit CH-300

(1) 10-meter extension cable

(4) 5-meter extension cable

CU-300 Control Unit

CH-300 Chairman Microphone Unit

CBL-300 Extension Cable

DU-300 Delegate Microphone Unit

Microphone Units

Our microphone units are the perfect solution to enable participants engage in a discussion or conference. Each unit has a button to activate/ deactivate the microphone, a lighted ring that lights up when the microphone is activated to give a visual indication that the mic is active, and a speaker to listen to the audio of the other contribution units and auxiliaries.

CH-300 Chairman Unit

The CH-300 Chairman Unit enables the chairperson or moderator to participate in a discussion by speaking through a microphone. It can be activated or deactivated by pressing the microphone ON/OFF push-button. The chairperson can listen to the discussion through the internal loudspeaker or the external headphone. It also features a "priority button," which enables the chairperson to control the discussion by temporarily or permanently overriding and deactivating all active delegate units. When the microphone is active, an LED ring lights up to visually indicate the microphone ON status.

The chairman unit can be connected to any other chairman or delegate units through the attached single cable. The last microphone unit in the series is connected to the control unit to complete the loop.

DU-300 Delegate Unit

The CU-300 Delegate Unit enables participants to engage in a discussion by speaking through a microphone. It can be activated or deactivated by pressing the microphone ON/OFF push-button. Participants can listen to the discussion through the internal loudspeaker or the external headphone. When the microphone is active, an LED ring lights up to visually indicate the microphone ON status.

Delegate units can be connected to one another or to a chairman unit through the attached single cable. The last microphone unit in the series is connected to the control unit to complete the loop.

CU-300 Control Unit

The CU-300 control unit has an audio output that combines all of the microphones' signals, eliminating the need of a multi-channel mixer and an operator to control the various microphones. The CS-300 is ideal for discussions and meetings of up to 150 participants. Each CU-300 Control Unit can handle up to 50 contribution microphones and with a maximum of 3 CU-300 Control Units per system you can handle up to 150 contribution microphones.

Cables

CBL-300 Extension Cable for CS-300 System (Available in 3 , 5, 10 and 20 meters/10, 16.5, 33 and 66 ft) for various microphone layouts.

Expansion Kit for 2 & 3 CUs

Interconnects 2 or 3 CU-300 control units for up to 100 microphone units. Ideal when more than one CU-300 is required.

EXK300-2 for 2 CU-12

EXK300-3 for 3 CU-12
